Sementeria specializes in delivering websites which include the content management system "WordPress." It's quick, easy and cost effective.

What is WordPress?

WordPress was originally created as a weblog or blog platform. But now WordPress has grown so powerful that you can use it to create any type of website and use it as a Content Management System (CMS).

Previously, businesses had to hire web design companies to create and maintain the websites by coding the contents into the web pages.

However, now you can retain control over your own website content by using a CMS, never having to worry about high web developers' fees again.

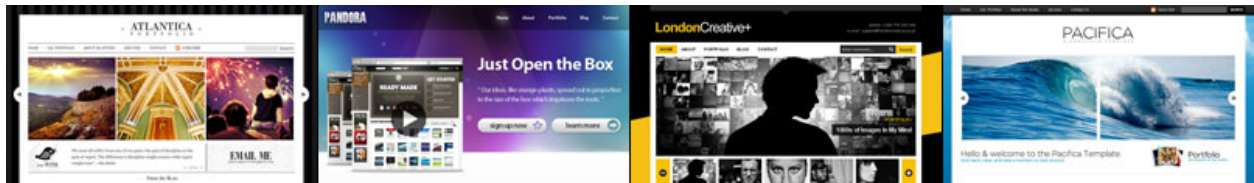

CMS stands for content management system and it's the latest in Internet technology. You will have the ability to add, edit and remove text, pictures, links, news and even entire sections, by simply logging in to an online editing program. All this can be done at any time and from any computer connected to the Internet.

To make a good use of WordPress, you will need:

- a powerful hosting service;
- a well designed and flexible theme;
- and some useful plugins.

There are hundreds of thousands of web hosts out there, the vast majority of which meet the WordPress minimum requirements, and choosing one from the crowd can be a chore. Just like flowers needing the right environment to grow in, WordPress works best when it's in a rich hosting environment.

We decided to go with one of the hosts suggested on the wordpress.org website. Media Temple is proud to host over 200,000 domains internationally. Their clients include Starbucks, Diesel, Sony, Warner Bros. and Toyota. We chose to work with Media Temple because we want you to feel safe when working with Sementeria to host your business.

Sementeria selects and offers clients the most cutting edge WordPress templates, packed full of features, presented beautifully with clean layouts, slick color palettes and neat typography.
